

ACCELERATES THE LIPOLYTIC PROCESSES

The active ingredient of this product is **caffeine**, a powerful component that plays a part in the **breakup of triglycerides and fatty acids** which also promotes the **correct blood flow** in those areas in which cellulite and localised fat prevent the correct skin oxygenation process.

Caffeine offers extremely satisfactory results in its normal use, due to its **hydration capacity** and as it is a powerful **natural antioxidant**. However, when combined with other active ingredients that are active in anti-cellulite and reducing treatments, caffeine acts as a **catalyst**, accelerating the lipolytic processes.

TREATMENTS

Localised fat, cellulite, eye contour, circulation problems.

ACTIVE INGREDIENTS

Caffeine

COMPOSITION

Aqua, Propylene Glycol, Caffeine
