

ELEMENTS * HA LIFTING

IT Pharma
INNOVATING TECHNOLOGY PHARMA

HYDRATES, FILLS AND FIRMS

Hyaluronic acid is the main active ingredient in the HA Lifting formula. HA **stimulates collagen synthesis** and is one of the **essential components** of the skin.

The distinctive feature of Hyaluronic Acid is its **hygroscopic capacity**, being a molecule that is able to capture up to 1000 times its weight in fluids. This guarantees that the collagen and elastin fibres are kept hydrated with no loss of elasticity, in order to avoid rupture and deterioration.

The ability of the body to autonomously produce this compound gradually decreases over time. Therefore, in order **to maintain the correct levels of Hyaluronic Acid**, this needs to be provided exogenously.

To sum up, this product is **necessary** for any type of cosmetic treatment and serves as a **basis for any combination** of facial treatments.

TREATMENTS

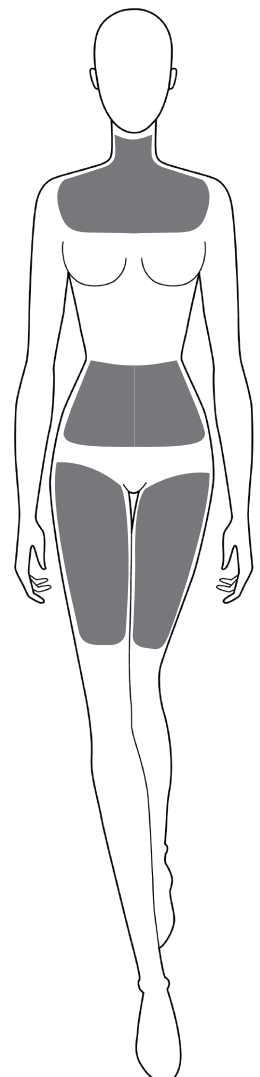

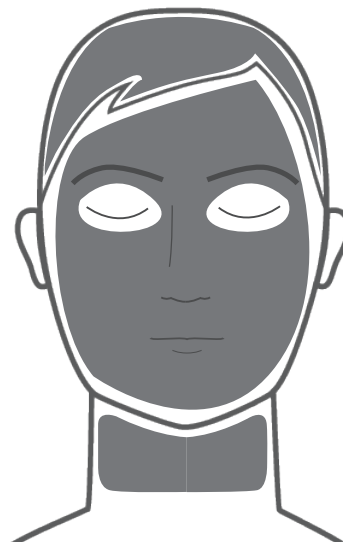

Anti-ageing, stretch marks, hydration, lifting, hair loss, firming.

ACTIVE INGREDIENTS

Hyaluronic acid

COMPOSITION

Aqua, Sodium Hyaluronate, Sodium Chloride, Potassium Phosphate.
