

## LOCALISED FAT REDUCTION

The formula combines the **anti-cellulite capacity** of Phosphatidylcholine together with the Sodium Deoxycholate that acts on localised fat.

Phosphatidylcholine is an active ingredient that acts on the fat cell adipocyte, making it water soluble and therefore **reducing the volume** of the treated area by transporting the soluble fatty acids to the lymph system for expulsion.

On the other hand, the Sodium Deoxycholate acts as a **powerful fat burner, liquefying the adipocyte**.

The definitive solution for difficult-to-treat localised fat.

## TREATMENTS

Cellulite, double chin, localised fat.

## ACTIVE INGREDIENTS

Phosphatidylcholine, Sodium Deoxycholate.

## COMPOSITION

Aqua, Phosphatidylcholine, Sodium Deoxycholate, Benzyl Alcohol, Sodium Metabisulfite.
