

REESTRUCTURING OF THE SKIN

The combination of active ingredients in Scultur Refort makes it possible to perform a **restructuring and firming** treatment of the skin tissues.

One of the specific features of this product is the use of Maris Aqua. This ingredient acts by **exfoliating** the skin, providing **trace elements** and **mineralising** the skin.

The Chondroitin Sulfate **firms the tissues**, correcting flaccidity and giving a younger-looking tone.

Finally, the Hydrolysed Collagen, strengthens the collagen network by providing considerable **regenerating activity** to the tissues as well as **firmness and elasticity**.
